

# Nurse/carer and Patient Language Helper : with Midwife Supplement

## Hand Picked Diaries

The Nurse Language Helper is an innovative new product brought to you by the people behind the Nurse Diary series. This comprehensive tool has been compiled specifically for bedside care in order to break potential language barriers between carer and patient. With 50 languages (chosen accordingly to the most common migrant languages), The Nurse Language Helper includes translations in paired sentences so the carer and patient can point to the related phrase in order to understand each other. These sentences and phrases have been chosen specifically after conducting surveys with over 100 nurses and carers over a 5-year period as part of their Nurse Diary contents. Translated by the National Accreditation Authority for Translators and Interpreters, each language includes 4 pages of translations such as common questions, instructions and answers about pain, sleep, food, drink and medication. It also includes support materials in regards to recognising language, notes in regards to cultural sensitivity and pictograms to further help communication.
